

BANKING MANAGEMENT SYSTEM

WEEK 2 – HASHMAP STORAGE

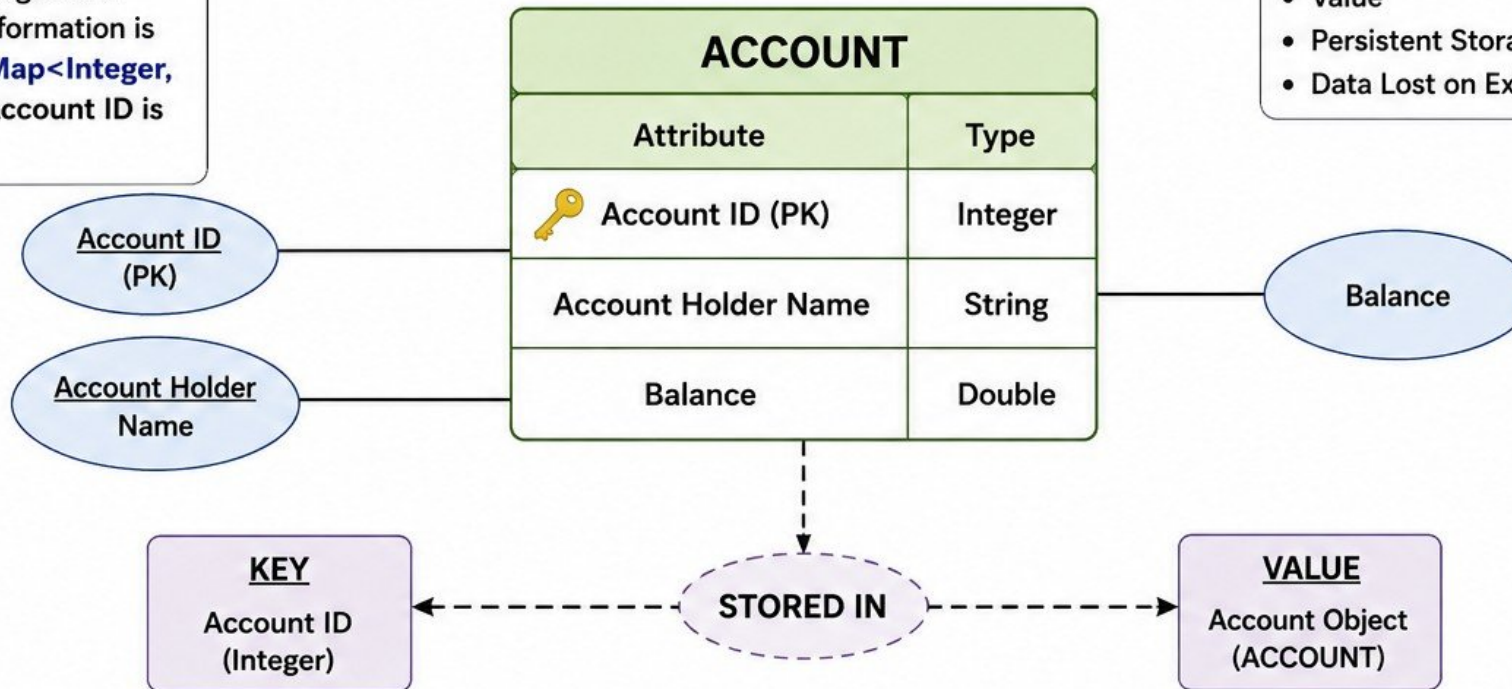

ER DIAGRAM

DESCRIPTION

This ER diagram represents the data structure used in Week 2 of the Banking Management System. Account information is stored using **HashMap<Integer, Account>** where Account ID is used as the key.

STORAGE DETAILS

- Collection Type : HashMap
- Key : Account ID (Integer)
- Value : Account Object
- Persistent Storage : No (In-memory only)
- Data Lost on Exit : Yes

LEGEND

- Entity
- Attribute
- Key / Value
- Relationship
- Primary Key (PK)

EXPLANATION

- **ACCOUNT** is the main entity that stores bank account details.
- Each account is uniquely identified by Account ID (Primary Key).
- Account Holder Name stores the name of the account holder.
- Balance stores the current balance of the account.
- In Week 2, all account records are stored in a HashMap using the structure: **HashMap<Integer, Account>** where Account ID is the key and Account Object is the value.

NOTES

- One **ACCOUNT** record is identified by a unique Account ID.
- No relationships with other entities in Week 2.
- Data is stored in memory only.
- Data will be lost when the application terminates.
